

# Yukon and the Northern Lights

4 days / 3 nights

From:

**\$880**

Per person / Double occupancy / Land package  
Arrival between November 1, 2022 and March 31, 2023

The scientific explanation for the dancing lights is that they are caused by the collision between electrically charged particles from the sun that enter the earth's atmosphere – doesn't sound overly exciting to most people but to actually see this phenomenon in person is absolutely amazing. The Northern Lights or Aurora Borealis fills the night sky often with a sulphurous-green sheen which ripples across the night sky. It arcs itself into an ebb and flow, slowly growing and then suddenly bursts across the full expanse of the sky. No viewing of the lights is ever the same as they can appear in shades of red, yellow and pink and in different shapes from patches or scattered clouds of light to streamers, arcs, rippling curtains or shooting rays that light up the sky with an eerie glow.
